

Chapter 8:

Decimals

Decimals

- Decimal numbers are numbers that are written according to their place value. The decimal point is used to separate whole numbers from number values less than one.

- The fraction in which the denominator are 10, 100, 1000 etc are known as decimal fraction.
- Numbers written in decimal form are called decimals.
- Decimals having the same number of decimal places are called like decimals, otherwise they are known as unlike decimals.
