

**Chapter- 13**  
**Fun with Magnets**

**Notes -**

- The substances having the property of attracting iron are known as magnets.
- Magnetite is a natural magnet
- Each magnet has two magnetic poles North pole and South pole.
- A freely suspended magnet aligns in N-S direction.
- A compass is a device with a magnetized needle used to detect direction.
- Opposite poles of two magnets attract each other whereas similar poles repel one another.
